Application/Control Number: 10/010,967

Art Unit: 1722

The disclosure is objected to because of the following informalities: paragraph 22, line 18, after "In" –a—should be inserted.

Appropriate correction is required.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 9-15, 17-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 495213 in view of Japan 59182781.

EP 495213 discloses an injection unit 1, a clamping unit having a fixed mold mounting plate (below 13) and a moving mold mounting plate (above 7), at least one injection molding station having an injection mold which includes a fixed mold half 5 attached to the fixed mounting plate, and a moving mold half 7 attached to the moving mounting plate, at least one embossing station disposed between the fixed and moving

Application/Control Number: 10/010,967

Art Unit: 1722

7

mounting plates, wherein the embossing station includes a stamping plunger 17a movable between the mounting plates and having attached thereon stamping tools. However, EP 495213 does not disclose a reservoir of a foil strip.

Japan 59182781 discloses a reservoir of a foil strip 11 to be conventional in an injection molding apparatus for the purpose of providing a decorative laminate layer to a molded article.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a reservoir of a foil strip in the apparatus of EP 495213 in order to provide a decorative laminate layer to a molded article as suggested by Japan 59182781. Providing an auxiliary element in the apparatus of EP 495213 to guide the stamping plunger would have been obvious in view of Japan 59182781 where auxiliary element 10 guides a stamping plunger.

Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over EP 495213 in view of Japan 59182781 as applied to claims 1-15, 17-26 above, and further in view of Webster's Ninth New Collegiate Dictionary.

While EP 495213 (as modified by Japan 59182781) does not disclose a guide bushing, Webster's Ninth New Collegiate Dictionary discloses bushings to be well known to serve as a guide.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a bushing in the apparatus of EP 495213 in order to guide the plunger as suggested by Webster's Ninth New Collegiate Dictionary.

Art Unit: 1722

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tim Heitbrink whose telephone number is 571-272-1132. The examiner can normally be reached on Tuesday-Friday 5:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ben Utech can be reached on 571-272-1137. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
